

# The World's First Combination Keyboard and TV Casino Games Device

The World's First Combination Keyboard and TV Casino Games Device combines two dissimilar consumer electronic devices into a frustrating, irrational contraption with no immediate purpose or benefit. After plugging the device into a TV, users can press the labeled keys to navigate 1 of 15 classic casino games with frustratingly poor responsiveness. The musical keyboard function remains fully intact, and can be mixed with the video signal to create additional on-screen distortion and difficulty.

**This device has not been UL certified. Do not use in wet environments.**

Inside the modified Casio SA-75 ...

- a. TV Casino Games board
- b. Custom conversion board
- c. Arbitrarily picked keys
- d. Video distortion controls

This conversion board was specifically designed to detect the minute voltage

change that occurs when a key is pressed on the keyboard. It then converts that signal to a simulated "button press" for the casino games board.
